Dear Mr President:

I am concerned about disease. There is a pandemic of COVID which you have worked to make an American problem by forcing people into work and schools, discouraging mask, usurping the limelight from health officers and refusing to lead or reimburse states did but while many more died diseases still do not respect borders. This makes world coordination essential for vaccine development, production and dissemination. WHO is organizing such an effort (Covax) which will enable faster development by pooling approaches and avoiding repetition, more efficient production and more effective deployment to reach hot spots and bring the disease down around the world so that society can reopen.

Please assure me that we will join WHO's Covax.

I am very proud to be a US resident and a large part of that derives from our world leadership.

Sincerely,
Eric Babson
