

# Two Variable Functions

Wednesday, May 31, 2023 8:56 AM

## - 1 variable function

•  $f(x) = e^{x^2} + x^2 \cos(x)$

one variable

$f(0) = 1$

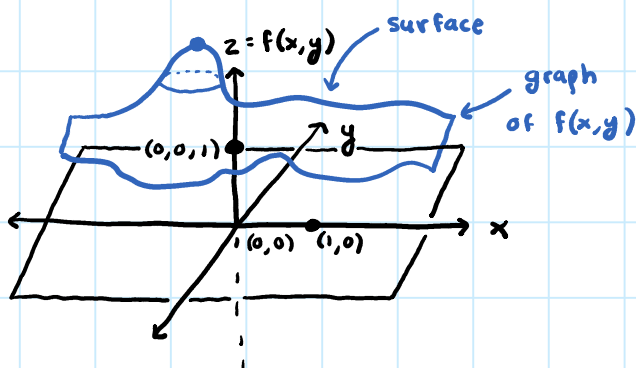

## - 2 variable functions

•  $f(x, y) = e^{xy} + xy^3 \cos(x+y)$

@  $(0, 0) = f(0, 0) = 1$

@  $(\pi, 0) = f(\pi, 0) = 1$

@  $(1, \pi) = f(1, \pi) = e^\pi + \pi^3 \cos(1+\pi)$

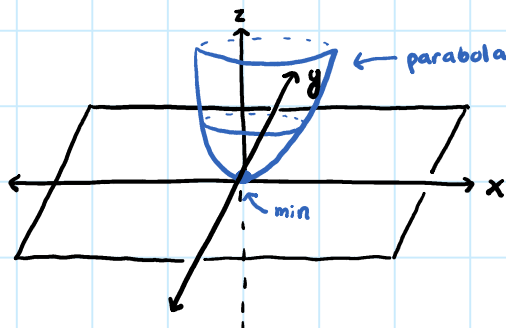

\* plug 2 variables → get 1 value \*

## examples :

1)  $f(x, y) = x^2 + y^2$

\* both - → negative parabola w/ max \*

2)  $f(x, y) = x^2 - y^2$

new type of critical point

saddle point
