

When Does the Derivative of  
 $y = f(x)$  NOT EXIST at a Point  
 $x = a$  ?

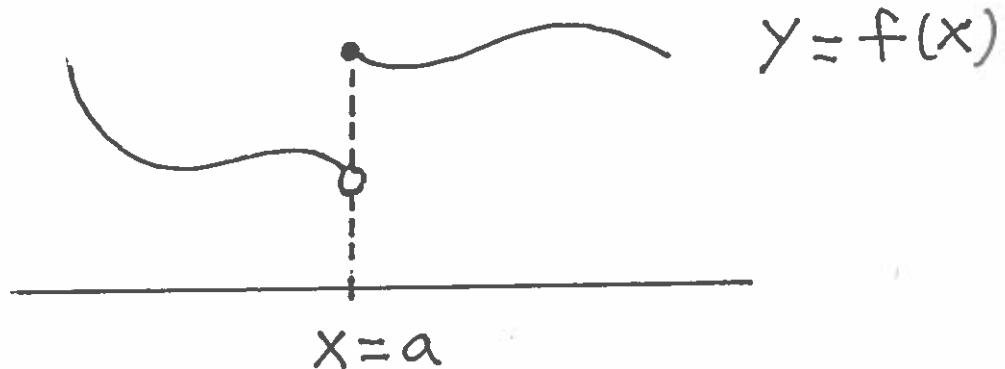

RECALL : If  $y = f(x)$ , then  $f'(a)$  is  
the SLOPE of the Tangent Line  
to the graph of  $f$  at  $x = a$ .

FACTS : The derivative  $f'(a)$   
does NOT EXIST if :

- 1.) the graph of  $f$  has a "corner"  
at  $x = a$  :

2.) the graph of  $f$  is not continuous at  $x=a$ :

3.) the graph of  $f$  has a vertical tangent line (SLOPE is undefined) at  $x=a$ :
