## MAT 22B, Final

Instructions:

- Unless otherwise stated, justify all of your answers. Partial credit will be given to partially correct answers. Answers with no justifications might not receive credit at all.
- Write all answers clearly in the provided space. Use reverse side of pages if needed.
- A scientific calculator is not allowed. It is not needed, you do not need to evaluate expressions of the form $\log (15)$.
- Textbooks, notes, and your own scratch paper are not allowed.

Name: $\qquad$ Id: $\qquad$

Problem 1. Solve an initial value problem

$$
y^{\prime}=t y^{2}, \quad y(0)=1
$$

Problem 2. Let $y(t)$ be the solution of the initial value problem

$$
y^{\prime}=y t+1, \quad y(0)=1 .
$$

Compute $y(0.3)$ using the Euler method with a step $h=0.1$.

Name:

Problem 3: Solve the initial value problem

$$
y^{\prime \prime}-3 y^{\prime}-4 y=0, \quad y(0)=1, y^{\prime}(0)=0
$$

Problem 4: Researchers study the response of an oscillator to an applied force. They include friction in their modeling and model the displacement, $y(t)$, of the oscillator from it's equilibrium position by the equation

$$
y^{\prime \prime}+2 y^{\prime}+2 y=\cos (\omega t)
$$

where the parameter $\omega$ represents the frequency of the applied force. They use a mathematical computer program to solve the equation for three different values of $\omega$, they use the same initial values in all three cases. They get solutions:

$$
\begin{equation*}
y(t)=-\frac{3}{5} e^{-t} \sin (t)+\frac{2}{5} \sin (t)-\frac{1}{5} e^{-t} \cos (t)+\frac{1}{5} \cos (t) \tag{i}
\end{equation*}
$$

(ii)

$$
y(t)=-\frac{9}{130} e^{-t} \sin (t)+\frac{4}{130} \sin (4 t)+\frac{7}{130} e^{-t} \cos (t)-\frac{7}{130} \cos (4 t)
$$

(iii)

$$
y(t)=-\frac{11}{85} e^{-t} \sin (t)+\frac{6}{85} \sin (3 t)+\frac{7}{85} e^{-t} \cos (t)-\frac{7}{85} \cos (3 t)
$$

(a) Find a particular solution of the equation for $\omega=1$.
(b) Determine the initial values that the researchers used.
(c) For each solution (i), (ii), (iii), determine the frequency $\omega$ of the applied force.
(d) Sketch the graph of the solution (i).

(e) Explain why, according to this model, the eventual (after a long time) frequency of oscillations of the oscillator is equal to the frequency of the applied force $\omega$.

Problem 5: Solve the initial value problem

$$
\binom{y_{1}^{\prime}}{y_{2}^{\prime}}=\left(\begin{array}{cc}
3 & 5 \\
-1 & -1
\end{array}\right)\binom{y_{1}}{y_{2}}, \quad\binom{y_{1}(0)}{y_{2}(0)}=\binom{0}{1} .
$$

Name:

Problem 6: Consider the system of differential equations

$$
\begin{aligned}
& x_{1}^{\prime}=x_{1} x_{2}-2 \\
& x_{2}^{\prime}=x_{1}-x_{2}+1
\end{aligned}
$$

(a) Find all equilibrium solutions for the system
(b) Find the corresponding linearized system at each equilibrium point that you found in (a)
(c) Which of the plots below best represent the phase space plot of the system? (the x-axis in the plots is $x_{1}$, the y-axis in the plots is $x_{2}$ )

(d) Plot 1 above shows two equilibrium points, one stable and one unstable. Mark the stable with "S" and the unstable with "U". (You do not need to justify your answer).

Problem 7. Consider the system of equations

$$
\binom{y_{1}^{\prime}}{y_{2}^{\prime}}=\left(\begin{array}{cc}
1 & 1 \\
3 & -1
\end{array}\right)\binom{y_{1}}{y_{2}} .
$$

(a) Find the eigenvalues and eigenvectors of the matrix.
(b) Determine what kind of equilibrium point this is (for example: stable node, unstable node, stable spiral point, central point, etc).
(c) Sketch the phase space plot of the system. The plot should at minimum show
(i) Direction arrows at points $(1,2),(2,2)$, and $(-2,2)$,
(ii) Solutions passing through points $(1,1),(-1,3)$, and $(1,2)$.

|  |  |  |  | $\cdots{ }_{\sim}{ }^{4}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  | 2 |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
| -4 |  | -2 |  | 0 |  |  |  | 2 |  | 4 |
|  |  |  |  |  |  |  |  |  |  | y_1 |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  | -2 |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  | -4 |  |  |  |  |  |  |

That is all. This is an empty page.
