Dear Mr President:

I am concerned about health. We face an epidemic and sixteen percent unemployment with the world's costliest health care system and access for half the population through work. Health care always has a large public good aspect as is particularly transparent now. Besides access for patients, the reward structure for providers and developers of health care has left vaccines and elder care underrewarded. The COVID epidemic you have welcomed and are refusing to help mitigate demands a shift to a single payer system in which those sick get sufficient support to not infect others and providers are paid in alignment with the public good. Instead you are slated to argue tomorrow in CA vs TX that 23 million people should lose their ACA insurance.

*Please assure me that you will support Obamacare and work to expand its reach.*

I am very proud to be a US resident and a large part of that derives from our excellent health care.

Sincerely,  
Eric Babson
