Elementary Row Operations -
Rules for Matrix Row Reduction
1.) Switch rows.
2.) Multiply a roue by a nonzero constant.
3.) Add a multiple of one row to another row.

Loals: i.) Create a 1 in each column with $O$ 's above and below the 1.
ii.) Move left to right through the matrix.
iii.) Do not "undo" the 1's and $O^{\prime}$ 's already completed.
