JEAN-PIERRE FRANÇOISE

Professor Françoise graduated in Mathematics and in Physics from Grenoble University, France and is currently professor of Mathematics at the Université P-M. Curie, Paris 6, France, and a member of the Laboratoire Jacques-Louis Lions. His scientific research activity focuses on small oscillations near equilibrium of Hamiltonian systems, singularity theory of functions and vector fields, normal forms and semi-classical analysis, integrable systems, bifurcation theory of dynamical systems, finiteness properties of singular projections of analytic sets, bursting oscillations, synchronization and phase locking of weakly coupled oscillators and isochronous systems.

GREGORY L. NABER

Dr. Gregory L. Naber received all three of his degrees in Mathematics from Carnegie-Mellon University and has since held positions in Pennsylvania, California, Hong Kong and Tennessee. His areas of interest include differential topology and geometry and, most particularly, their interaction with mathematical physics. It is this interaction, and the desire to make it more widely known, appreciated and utilized in the mathematical community that has motivated nearly all of his published work, as well as his involvement with the Encyclopedia of Mathematical Physics.

TSOU SHEUNG TSUN

Dr. Tsou Sheung Tsun obtained her B.Sc. in Hong Kong and her Doctorat es Sciences in Geneva. She has held research fellowships at Wadham College, Oxford, and at the Mathematical Institute, Oxford, where she is now on the Faculty. Trained both as a mathematician and a physicist, Dr. Tsou has worked in gauge theory, string theory and particle physics. Recently she has concentrated on theoretical problems connected with the generation puzzle, neutrino oscillation and electric-magnetic duality. She is also active in the European Mathematical Society and European Women in Mathematics.

Encyclopedia of Mathematical Physics

First comprehensive interdisciplinary coverage

www.elsevier.com/mathematics

www.elsevier.com/emp

Bibliographical Information:

Editors:	
Jean-Pierre Françoise	Université P-M. Curie, Paris 6, France
Gregory L. Naber	Drexel University, Philadelphia, USA
Tsou Sheung Tsun	University of Oxford, UK
Volumes:	5
ISBN:	0-12-512660-3
Publication Date:	May 2006
Imprint:	Elsevier / Academic Press
Pages:	Approx. 3500
Articles:	Approx. 400

Website:	www.elsevier.com/emp
Available Online:	2006
Audience:	Research students, researchers and professionals who are seeking an authoritative source of information about any particular aspect of mathematical physics

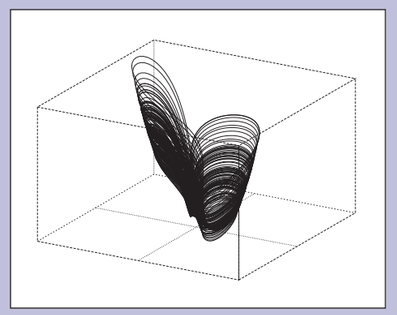
2005 List Price	$1,990
Introductory Price*	**$1,495**

*Valid until the end of the third month after publication

Key features of the Encyclopedia of Mathematical Physics

1. First comprehensive interdisciplinary coverage.

2. Mathematical Physics explained to stimulate new developments and foster new applications of its methods to other fields.



M. Aziz Alaoui - Synchronization of chaos

3. Written by an international group of experts.

4. Contains several undergraduate-level introductory articles to facilitate acquisition of new expertise.

5. Thematic index and extensive cross-referencing to provide easy access and quick search functionality.

6. Also available online with active linking.

www.books.elsevier.com

DESCRIPTION

Based on some 400 carefully selected entries written by an international group of experts, the encyclopedia enables readers to uncover the extensive body of knowledge that has accumulated in Mathematical Physics. It provides, for the first time, a complete resource for researchers, students and lecturers in this interdisciplinary subject. It also aims to stimulate new research in mathematical physics and to foster applications of its methods to new fields.

CONTENTS

- Classical, Conformal and Topological Field Theory
- Classical Mechanics
- Condensed Matter Physics and Optics
- Differential Geometry
- Dirac Operators
- Dynamical Systems
- Fluid Dynamics
- Functional Analysis and Variational Techniques
- Gauge Theory
- General Relativity
- Integrable Systems
- Lie Groups and Lie Algebras
- Low Dimension Geometry
- Many Particle Systems
- Noncommutative Geometry
- Partial Differential Equations and ODEs
- Path Integrals/Functional Integrals
- Perturbation Theory
- Quantization Techniques
- Quantum Field Theory
- Quantum Gravity
- Quantum Groups
- Quantum Information and Computation
- Quantum Mechanics
- Renormalization
- Scattering Theory
- Semi-classical Approximations
- Singularity Theory
- Statistical Mechanics
- Stochastic Methods
- String Theory and M-Theory
- Supersymmetry
- Symmetry and Conservation Laws
- Symplectic Techniques
- Topological Methods

ONLINE VERSION AVAILABLE IN 2006

(Sold separately)

The encyclopedia is published as a print set and also released as an electronic reference source on ScienceDirect, the electronic platform of all Elsevier electronic publications. Electronic access offers increased functionality, including internal and external links that will enable efficient cross-referencing between related subjects and references to related material. More information on the online book program on ScienceDirect can be found at **www.info.sciencedirect.com/reference_works**

The electronic version is available to institutions, ranging from single sites to global organizations. Single-year and multi-year licenses are available. The fees are based upon the amount of users having access to the encyclopedia. For a tailor-made price quote, librarians can contact their Account Manager. For information on basic pricing, please visit **www.info.sciencedirect.com/reference_works/licensing**
