Student ID# and Section: \_\_\_\_\_

## Midterm Exam 2 Monday, March 1 MAT 21B, Temple, Winter 2021

## Print names and ID's clearly. Write the solutions clearly and legibly. Do not write near the edge of the paper. Show your work on every problem. Be organized and use notation appropriately.

You are NOT allowed to consult the internet, Piazza, your classmates, friends or family members, tutors, or any other outside sources, etc. during the exam. You may NOT provide or receive any assistance from another student taking this exam. You may NOT use any electronic devices to look up hints or solutions for this exam. Show all work. Correct answers with insufficient or incorrect justification will receive little or no credit. By signing above you acknowledge that you have read and will abide by these conditions. Your exam will not be graded without your signature.

| Problem | Your Score | Maximum Score |
|---------|------------|---------------|
| 1       |            | 20            |
| 2       |            | 20            |
| 3       |            | 20            |
| 4       |            | 20            |
| 5       |            | 20            |
| Total   |            | 100           |

**Problem #1 (20pts):** A rod placed on the x-axis between x = 1 and x = 2 has a density of  $\delta(x) = x^2 \frac{kg}{m}$ . (a) Find the total mass of the rod.

(b) Find the *x*-coordinate of the center of mass of the rod.

**Problem #2 (20pts):** Recall that the anti-derivative of  $x^n$  is given by  $\int x^n dx = \frac{x^{n+1}}{n+1} + C$ , which holds for every positive and negative integer except n = -1. Recall that we defined  $\ln x = \int_1^x \frac{dt}{t}$  to be the missing anti-derivative.

(a) By what theorem is  $\frac{d}{dx} \ln x = \frac{1}{x}$ ?

(b) Use the fact that  $\frac{d}{dx} \ln x = \frac{1}{x}$  to prove that  $\ln bx = \ln b + \ln x$ .

(c) Recall that we defined  $y = e^x$  to be the inverse of  $y = \ln x$ , so

$$e^{\ln x} = x = \ln e^x.$$

Use the chain rule to show that we must have  $\frac{d}{dy}e^y = e^y$  if  $y = \ln x$ .

**Problem #3 (20pts): (a)** Recall that the principal grows like  $P = P_0 e^{rt}$  where r is the interest rate. If the interest rate is 20 percent per year, find the time it takes for your money to double.

(b) Use the method of separation of variables to find the solution y(t) of the initial value problem  $y' = t^3 y$ , y(0) = 2.

Problem #4 (20pts): Evaluate the following integrals:

(a)  $\int_0^{\pi/4} \frac{\sin x}{\cos x} dx =$ 

(b)  $\int x e^x dx =$ 

(c) 
$$\int \frac{x}{4+x^2} dx =$$

## Problem #5 (20pts):

(a) Use the method of partial fractions to evaluate the anti-derivative:

 $\int \frac{2x^2 + x + 1}{(x-2)(x+1)(x-3)} =$ 

(b) Write the partial fractions expansion for the following integral. (Do not solve for the constants.)

 $\int \frac{x+1}{(x-1)(x+2)^2(x^2+x+1)^3} dx =$
