### New Singularity in Space-Time Found

A singularity is a patch of space-time that cannot be made to look flat in any coordinate system, Temple said. One example of a singularity is inside a black hole, where the curvature of space becomes extreme.

Temple and his collaborators study the mathematics of how

shockwaves in a perfect fluid can affect the curvature of space-time in general relativity. In earlier work, Temple and collaborator Joel Smoller, the Lamberto Cesari professor of mathematics at the University of Michigan, produced a model for the biggest shockwave of all, created from the Big Bang when the universe burst into existence.

A shockwave creates an abrupt change, or discontinuity, in the pressure and density of a fluid, and this creates a jump in the curvature. But it has been known since the 1960s that the jump in curvature created by a single shock wave is not enough to rule out the locally flat nature of space-time. \*Vogler's doctoral work used mathematics to simulate two shockwaves colliding, while Reintjes followed up with an analysis of the equations that describe what happens when shockwaves cross. He found this created a new type of singularity, which he dubbed a "regularity singularity."

Libraries

On the advice of anonymous poster that most public library systems offer free ebooks, audiobooks, and music downloads to their customers for free, I did some checking and found that there are a large amount of offerings available through online libraries. It appears most, if not all, require a local library card. These are sites that have links to local library sites.

LibWeb is a good search source for local libraries online. A good selection of US and worldwide locations.

Public Libraries very good for US, looked not as thorough as LibWeb on worldwide.

Internet Public Library also has some links, but I found the above two to be superior set ups.

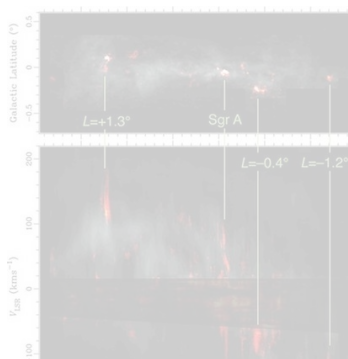

Genre Pages

Because this page is becoming extremely long I have switched the genre sections to their own pages. Please check these separate pages out if you are interested in a particular genre as they have some links that have not been added to this main list as of yet and they also have links to audio books.

## 'Seeds' of Milky Way's Supermassive Black Hole Discovered

It is estimated that the largest explosion that occurred in the masses of molecular gas is equivalent to 200 supernova explosions. On the other hand, the age of the gas mass is approximately 60,000 years old. It can be inferred that a huge star cluster (image above) is buried in one of the gas masses. The mass of the cluster (more than 100,000 times the

community and creativity of the Cuban people during this difficult time.

Cubans share how they transitioned from a highly mechanized, industrial agricultural system to one using organic methods of farming and local, urban gardens. It is an unusual look into the Cuban culture during this economic crisis, which they call "The Special Period."

The film opens with a short history of Peak Oil, a term for the time in our history when world oil production will reach its all-time peak and begin to decline forever. Cuba, the only country that has faced such a crisis – the massive reduction of fossil fuels – is an example of options and hope.

## One Per Cent: Expressive face helps robot bridge 'uncanny valley'

Like what you see? Then you'll love the Technology section in New Scientist magazine.

READ  
NEW SCIENTIST  
MAGAZINE  
SUBSCRIBE  
TODAY

A good-looking robot is seriously hard to find. Robots can be pretty, some even handsome, but as soon as they get too realistic they start to creep us out. A new system for helping robots to generate more realistic expressions might go some way to help. Many years ago, roboticists realised that as you morph an abstract robot into a human you generate a peak of unease - the "uncanny valley principle" - that makes people feel uncomfortable when a robot looks realistic but not realistic enough. Some say it's because they remind us of a corpse. However, research has shown that if you manipulate the robotic images so that they are more attractive, you can bypass this feeling of unease.

To create a robot we are more likely to accept, life-like expressions are vital. That's why Nicole Lazzari at the University of Pisa, Italy, and her colleagues have designed a "Hybrid Engine for Facial Expressions Synthesis" (HEFES) - a facial animation engine that gives realistic expressions to a humanoid robot called FACE.

FACE's appearance is modelled on one of the team's wives. "It's really realistic," says Lazzari, who presented the work at BioRob in Rome last month. See for yourself in the video above.

To mimic the myriad expressions that facial muscles are capable of achieving, the team placed 32 motors around FACE's skull and upper torso that manipulate its polymer skin in the same way that real muscles do.

mass of the sun) is comparable to the largest star cluster found in the Milky Way Galaxy. It is thought that IMBHs are formed

within such huge star clusters.

Eventually, IMBHs born near the center of the Milky Way Galaxy expand into a supermassive black hole at the nucleus of the galaxy. The team observed emission lines at wavelengths of 0.87 mm, emitted from carbon monoxide molecules in an area of several degrees that includes the center of the Milky Way Galaxy.

## Usman Riaz and Preston Reed: A young guitarist meets his hero | Video on TED.com

Usman Riaz is a 21-year-old whiz at the percussive guitar, a style he learned to play by watching his heroes on YouTube. The TED Fellow plays onstage at TEDGlobal 2012 -- followed by a jawdropping solo from the master of percussive guitar, Preston Reed. And watch these two guitarists take on a very spur-of-the-moment improv.

Preston Reed's hands have an otherworldly coordination. The fingers, nails, thumbs, and palms of both left and right dance, pluck, strum, and slap his guitar, which bursts with a full sound.

## New Scientist TV: First video captures snow leopard mother with cubs

aSnow leopards are hard to pin down due to their elusive nature and the treacherous environment they inhabit.

To create expressions they used a combination of motor movements based on the Facial Action Coding System (FACS) - a system created over 30 years ago which codes facial expressions in terms of anatomic muscle movements. HEFES is used to control FACE's expressions. It is essentially a mathematical programme that creates an "emotional space" which a person can use to choose an expression for FACE that exists anywhere between one or more basic emotions, including anger, disgust, fear, happiness, sadness, and surprise. The algorithm then works out which motors need to be moved to create that expression or transition between two or more. The team evaluated the accuracy of their expressions by asking five autistic and 15 non-autistic children to identify a set of expressions performed first by FACE and then by a psychologist. Both groups were able to identify happiness, anger and sadness but less able identify fear, disgust and surprise. So is it more attractive? I'm not convinced. But FACE's ability to smoothly transition between one emotion and another is pretty remarkable. And not too creepy.

## Powerful Luminous Outburst From A Black Hole In M83 Observed By Chandra - MessageToEagle.com

But now scientists from Panthera and the Snow Leopard Trust have captured the first video of a mother with her cubs after locating a den in the Tost Mountains of Mongolia.

While the mother was hunting, the team weighed and measured the cubs and took photos. Two of the young leopards were then tagged with microchips for future identification.

Since the animals are hard to track down, the discovery should help reveal details about their habits to help with conservation. Scientists have yet to find out when and where snow leopards give birth, the typical size of a litter and how likely a cub is to survive into adulthood.

For more animal clips, watch an adult snow leopard caught on camera or see tiger cubs playing in the wild.

## New Scientist TV: First animation reveals how a face forms in the womb

Your pretty face wasn't always so pretty: the first animation of a face forming in the womb reveals how different features morph during development.

The time-lapse, produced for the BBC series *Inside the Human Body*, is based on human embryo scans captured between 1 and 3 months after conception, the period during which a face develops. Virtual sculptures were created at different stages, then combined by mapping hundreds of points to corresponding dots on the other models. "It was a nightmare for structures like the nose and palate, which didn't exist for most of the animation," says David Barker, the graphics researcher on the production. "Their formation is a complicated ballet of growth and fusion of moving plates of tissue." A close look at the animation reveals that a face forms from three main features that rotate into place, meeting at the philtrum, the groove above the top lip. The transformation occurs with very precise timing and delays can result in a cleft lip or palate.

For more intriguing views of the body, watch *Inside the Human Body*, which will be airing in the UK and Ireland on 16 July at 9 pm as part of a month of science programmes on Eden TV. If you enjoyed this video, you might like to see the first MRI movie of a baby's birth or watch an incubator spy on a developing embryo.

## Web Service Summarizes Long Text Into Twitter-Sized Precis

Today I've spent a little time playing with a fascinating new web service called Summarizer, which claims to be able to summarize a chunk of text of any length into just a couple of sentences. Or 140 characters, to be precise. Which is, of course, very handy if you want to upload the summary to Twitter. If you want to try the service for yourself, it's at <http://www.summarizer.info/index.html>. It's very easy to use. Just paste in some text, press the button, and your summary appears in just a second or so.

The people behind Summarizer claim that it's the result of decades of research from a leading university, so I've been trying to put it to the test. I started by asking it to summarize some of my own text. For example, I fed it 10,000 words of a document that I wrote for a client about Microsoft SharePoint. What it

Primer is a 2004 American science fiction drama film about the accidental discovery of a means of time travel. The film was written, directed, and produced by Shane Carruth and was completed on a budget of \$7,000.[2] Carruth graduated from college with a degree in mathematics and is a former engineer. [3] Primer is of note for its extremely low budget, experimental plot structure, philosophical implications, and complex technical dialogue, which Carruth chose not to simplify for the sake of his audience. One reviewer said that "anybody who claims he fully understands what's going on in Primer after seeing it just once is either a savant or a liar." [4] The film collected the Grand Jury Prize at Sundance in 2004 before securing a limited release in US cinemas, and has since gained a cult following.

## Earth's magnetic field just might be gearing up for a reversal

To have any idea of when a reversal might occur, we first need to know more about the mechanism that causes it, and that's where new research by Peter Olson and Renaud Deguen of Johns Hopkins enters the picture. Their seismic imaging of Earth's core revealed lopsided growth — in other words, the core wasn't

spherical or even all that close to it, with one hemisphere slowly melting into something noticeably smaller than the other half. Currently, the eastern hemisphere of the core is bigger than its western counterpart.

This lines up neatly with the current location of the axis of Earth's magnetic field. The line linking the two magnetic poles doesn't pass right through the center of the Earth, but is in fact offset about 300 miles eastward. Their data suggests this is a change from recent history, as until about 200 years ago the magnetic axis was solidly in the western hemisphere for at least 10,000 years. In what is likely not a coincidence, it was about two centuries ago that the inner core's eastern hemisphere started growing bigger.

www.youtube.com - July 11, 12:20 PM

that I wrote for a client about Microsoft Sharepoint. What it produced made perfect sense, but I was in two minds as to whether it really represented an accurate summary of my 15 pages. But could anything do any better? How can you summarize 15 pages into just 2 sentences, and still retain as much of the meaning as possible?

I decided to try a different tack. I gave Summarizer some text that I'd never seen before. A story from the BBC News web site about the current situation in Rwanda. I know nothing about this topic and so, instead of reading the article on the BBC site, I asked Summarizer to precis it for me. You can see both of the pieces of text below.

Having read the summary, I then read the full BBC story. And I have to admit, summarizer had actually made a pretty neat job of it. The summary contained only 1 sentence, but it had certainly pulled out one of the most important facts from the entire story.

Give Summarizer a try. It's fast, fun, free, needs nothing but a web browser, and is nothing if not fascinating.

## The Mystic Trumpeter by Walt Whitman

The Mystic Trumpeter

HARK! some wild trumpeter--some strange musician,

Hovering unseen in air, vibrates capricious tunes to-night.

I hear thee, trumpeter--listening, alert, I catch thy notes,

Now pouring, whirling like a tempest round me,

Now low, subdued--now in the distance lost.

Come nearer, bodiless one--haply, in thee resounds

Some dead composer--haply thy pensive life

Was fill'd with aspirations high--uniform'd ideals,

Waves, oceans musical, chaotically surging,

That now, ecstatic ghost, close to me bending, thy cornet echoing,

pealing, 10

Gives out to no one's ears but mine--but freely gives to mine,

That I may thee translate.

Blow, trumpeter, free and clear--I follow thee,

While at thy liquid prelude, glad, serene,

The fretting world, the streets, the noisy hours of day, withdraw;

A holy calm descends, like dew, upon me,

I walk, in cool refreshing night, the walks of Paradise,

I scent the grass, the moist air, and the roses;

Thy song expands my numb'd, imbonded spirit--thou freest, launchest

me,

Floating and basking upon Heaven's lake. 20

Blow again, trumpeter! and for my sensuous eyes,

Bring the old pageants--show the feudal world.

What charm thy music works!--thou makest pass before me,

Ladies and cavaliers long dead--barons are in their castle halls--the

troubadours are singing;

Arm'd knights go forth to redress wrongs--some in quest of the

Holy

Grail:

I see the tournament--I see the contestants, encased in heavy armor,

seated on stately, champing horses;

I hear the shouts--the sounds of blows and smiting steel:

I see the Crusaders' tumultuous armies--Hark! how the cymbals clang!

## Any Sufficiently Advanced Civilization is Indistinguishable from Nature

Any Sufficiently Advanced Civilization is Indistinguishable from Nature

Rachel Armstrong

Posted: May 17, 2012

In Western cultures, nature is a cosmological, primal ordering

force and a terrestrial condition that exists in the absence of human beings. Both meanings are freely implied in everyday conversation. We distinguish ourselves from the natural world by manipulating our environment through technology. In *What Technology Wants*, Kevin Kelly proposes that technology behaves as a form of meta-nature, which has greater potential for cultural change than the evolutionary powers of the organic world alone.

“Any sufficiently advanced technology is indistinguishable from magic.” [1]

With the advent of ‘living technologies’ [2], which possess some of the properties of living systems but are not ‘truly’ alive, a new understanding of our relationship to the natural and designed world is imminent. This change in perspective is encapsulated in Koert Van Mensvoort’s term ‘next nature’, which implies thinking ‘ecologically’, rather than ‘mechanically’. The implications of next nature are profound, and will shape our appreciation of humanity and influence the world around us.

## The God Particle as Possibility Field | Ask Deepak!

Lo! where the monks walk in advance, bearing the cross on high!  
Blow again, trumpeter! and for thy theme, 30  
Take now the enclosing theme of all--the solvent and the setting;  
Love, that is pulse of all--the sustenance and the pang;  
The heart of man and woman all for love;  
No other theme but love--knitting, enclosing, all-diffusing love.  
O, how the immortal phantoms crowd around me!  
I see the vast alembic ever working--I see and know the flames  
that  
heat the world;  
The glow, the blush, the beating hearts of lovers,  
So blissful happy some--and some so silent, dark, and nigh to  
death:  
Love, that is all the earth to lovers--Love, that mocks time and  
space;  
Love, that is day and night--Love, that is sun and moon and  
stars; 40  
Love, that is crimson, sumptuous, sick with perfume;  
No other words, but words of love--no other thought but Love.  
Blow again, trumpeter--conjure war's Wild alarms.  
Swift to thy spell, a shuddering hum like distant thunder rolls;  
Lo! where the arm'd men hasten--Lo! mid the clouds of dust, the  
glint  
of bayonets;  
I see the grime-faced cannoniers--I mark the rosy flash amid the  
smoke--I hear the cracking of the guns:  
--Nor war alone--thy fearful music-song, wild player, brings  
every  
sight of fear,  
The deeds of ruthless brigands--rapine, murder--I hear the cries  
for  
help!  
I see ships foundering at sea--I behold on deck, and below deck,  
the  
terrible tableaux.  
O trumpeter! methinks I am myself the instrument thou playest!  
50  
Thou melt'st my heart, my brain--thou movest, drawest,  
changest them,  
at will:  
And now thy sullen notes send darkness through me;  
Thou takest away all cheering light--all hope:  
I see the enslaved, the overthrown, the hurt, the oppressed of the  
whole earth;  
I feel the measureless shame and humiliation of my race--it  
becomes  
all mine;  
Mine too the revenges of humanity--the wrongs of ages--baffled  
feuds  
and hatreds;  
Utter defeat upon me weighs--all lost! the foe victorious!  
(Yet 'mid the ruins Pride colossal stands, unshaken to the last;  
Endurance, resolution, to the last.)  
Now, trumpeter, for thy close, 60  
Vouchsafe a higher strain than any yet;  
Sing to my soul--renew its languishing faith and hope;  
Rouse up my slow belief--give me some vision of the future;  
Give me, for once, its prophecy and joy.  
O glad, exulting, culminating song!  
A vigor more than earth's is in thy notes!

The "God Particle" is still circulating heavily in the news. All particles, including the Higgs Boson particle - or the Anglo-Indian particle - until measured is a possibility field. That field is consciousness that self-interacts and produces observer, process of observation and that which is observed. Science is based on a subject/observer split. Empirical facts - that's how we do science. But the split is artificial - we are one. You are the ultimate reality. The ground of your being is the ground of the universe. Go beyond your ego and you end up with the self of the universe. If the Higgs Boson pans out then it is a movement toward understanding what we call the unified field theory. ## Image of the Day: The Most Magnificent Galaxy in the Observable Universe?

Image of the Day: The Most Magnificent Galaxy in the Observable Universe?

Galaxy NGC 1512 gets our vote hands down as the most extraordinarily beautiful known galaxy in existence. The center of the magnificent barred spiral galaxy reveals a stunning 2,400 light-year-wide circle of infant star clusters. Astronomers generally believe that the giant

bar, which is too faint to be seen in this image, funnels the gas to the inner ring, where massive stars are formed within numerous star clusters. NGC 1512 Located 30 million light-years away, is a neighbor of our Milky Way galaxy.

In the NASA photo, below, each top panel image was made with a filter and camera sensitive to a different wavelength band in the electromagnetic spectrum. Arranged by increasing wavelength, at the far left are two ultraviolet images from Hubble's Faint Object Camera. Next are two visible light images from its Wide Field Planetary Camera 2, followed on the right by three infrared images from the Near Infrared Camera and Multi-Object Spectrograph.

These images show that the center of NGC 1512 appears dramatically altered when viewed in different wavelength bands. In particular, the ultraviolet images highlight clusters of young, hot stars in a ring 100 light years wide surrounding the core

Marches of victory--man disenthral'd--the conqueror at last!  
Hymns to the universal God, from universal Man--all joy!  
A reborn race appears--a perfect World, all joy!  
Women and Men, in wisdom, innocence and health--all joy! 70  
Riotous, laughing bacchanals, fill'd with joy!  
War, sorrow, suffering gone--The rank earth purged--nothing  
but joy  
left!  
The ocean fill'd with joy--the atmosphere all joy!  
Joy! Joy! in freedom, worship, love! Joy in the ecstasy of life!  
Enough to merely be! Enough to breathe!  
Joy! Joy! all over Joy!

perfect literats for America,  
For noble savans, and coming musicians.  
All must have reference to the ensemble of the

world, and the compact  
truth of the world;  
There shall be no subject too pronounced--All works shall  
illustrate  
the divine law of indirections.  
What do you suppose Creation is?  
What do you suppose will satisfy the Soul, except to walk free,  
and  
own no superior?  
What do you suppose I would intimate to you in a hundred  
ways, but  
that man or woman is as good as God?  
And that there is no God any more divine than Yourself?  
And that that is what the oldest and newest myths finally mean?  
10

not stars in a ring 2,400 light-years wide surrounding the core. Astronomers are searching for cause of this awesome cosmic starburst ring. When we look at a galaxy such this we shake our heads in awe, wondering how many life-bearing planets might exist there. Image credits: courtesy of Hubble/NASA and APOD: D. Maoz (Tel-Aviv Univ./Columbia Univ.) et al., ESA, NASA
