

Acknowledgements - Applied Mathematics

“What doesn’t kill me makes me stronger”

— Friedrich Nietzsche

... but Nietzsche failed to stress that “it almost kills you!”

— Conan O’Brien

So is the prelim exam!

I have expressed my gratitude to most people in the acknowledgements of the analysis portion. Some of the people mentioned there also contributed much to my notes for the applied math preliminary exam. In particular, I am thankful to Evan Smothers, whose solutions for MAT 207C homework and exams were very useful in my studies. I got his permission to upload some of his work. More importantly, I would like to express my sincere gratitude specifically to Prof. Timothy Lewis, Prof. Becca Thomases, and Prof. Sam Walcott for their teaching and encouragement throughout the year. Every time I got into trouble and was ready to pack my stuff to quit the program, they told me to stay behind. I cannot thank you enough for their kindness. Without them I would not be able to appreciate the beauty inherited in bifurcation theory, phase model of neural oscillators, muscle mechanics, and viscoelastic fluid. Indeed beautiful mathematics manifest itself everywhere in nature.

I sincerely wish you the very best in your preliminary exams. I have no doubt that you will do great!
